

Why You Need Lightweight Computing.

Cost-Effective.

Small-board computers are typically more affordable compared to traditional desktop computers, making them a cost-effective solution.

Space & Power Saving.

Our AOLC Thin Client consume minimal power, making them an excellent choice for running on a backup supply during load shedding.

Plug & Play Solution.

Our AOLC Thin Client are meant to be plug-and-play solutions and are easily deployable in practically any setting.

Education.

AOLC Thin Client provide learners hands-on experience with computers and technology.

Internet Of Things.

AOLC Thin Client are capable of controlling IoT (Internet of Things) and home automation smart devices.

Industrial Automation.

AOLC Thin Client can be utilised in factory automation and robotics to operate machinery and equipment.

Media & Entertainment.

AOLC Thin Client can be used in entertainment applications like home media centres and streaming devices.

Healthcare.

AOLC Thin Client can be used in healthcare for things like patient monitoring and medical imaging.

Retail.

Digital signage and point-of-sale systems use small-board computers since they're adaptable and cost-effective.

Security.

Surveillance and access control systems use small-board computers because they are an inexpensive way to monitor security.

Call Centres.

Small-board computers save space and money in customer service centres while providing cloud access and proprietary solutions to manage calls.
